Innovative Control Systems, Design and Solutions

Jmax Network Controller

- Generates and encodes the signals for the Jmax home automation.
- Provides status indication for zones on the system.
- Monitors for short circuit faults.
- Provides a Modbus interface for interrogation by other equipment.
- Provides a programming port for reprogramming the operation of zones on the network in circuit.
- Available in a 12VDC or 240VAC powered unit.
- The 240VAC model is capable of providing 600mA of 12VDC network power for small installations.
- The unit can be foot or top hat rail mounted.
- Box dimensions 75mm high x 100mm wide x 130mm deep with rail mounting.
