JMax 5 Zone Relay General Load Controller (Multiple loads per zone)

This unit will control 5 general purpose loads. It is suitable to switch 240VAC voltage via on/off control.

- Maximum load per channel is 1000 watts. Greater loads should use an interposing relay.
- Full Jmax functionality. Multiple switching locations, linked to sensors, sleep mode, alarm and holiday mode.
- The low voltage control circuitry is galvanically isolated from the 240VAC circuitry via opto couplers.
- This unit should only be installed by a licenced electrician, due to the lethal voltages.
- It is suitable for mounting in a roof space or other areas adjacent to loads.
- Connects to JasNet via Twin figure 8 cables or Cat 5. (dual cat 5 connections for looping)
- Housing dimensions 230mm wide x 185mm high x 90mm deep.
